***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicants' submissions: amendments to the claims, a Declaration under 37 CFR 1.132, and remarks filed on 31 October 2007 and 14 January 2008 have been entered.

***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 12 and 13 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3 of U.S. Patent No. 6,458,288 B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because the

method of effecting lubrication in compression-type refrigerators using a refrigerant and comprising as the lubricant a lubricating oil comprising at least one polyoxyalkyleneglycol derivative wherein the oxyalkylene is an alkylene group having 3 carbon atoms (propylene) may be the same as the claimed invention when the viscosity of the polyoxyalkyleneglycol derivative is between 2 and 9.70 cSt at 100°C. Although the viscosity is not claimed in the patent, the disclosure sets forth a viscosity within the claimed range of the application.

This application is a continuation of S.N. 07/502,872 which issued as U.S. Patent No. 6,458,288. This rejection was not made previously because applicants originally filed a completely different set of claims.

The rejection of claims 10-15 on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/241,479 made in the previous office action is withdrawn in view of the submission of a terminal disclaimer on 30 April 2007 which was approved on 11 May 2007.

The rejection of claims 10-15 under 35 U.S.C. 103(a) as being unpatentable over Sasaki et al (4,267,064) made in the previous office action is withdrawn in view of the amendments to the claims limiting the viscosity of the polyoxyalkyleneglycol derivative to between 2 and 9.70 cSt at 100°C. Support for the terminal 9.70 cSt value is found in Example 8-Table 1 in the specification. The Declaration under 37 CFR 1.132 demonstrates that the claimed lubricating oils comprising polyoxyalkyleneglycol derivatives with kinematic viscosities of less

than 10 cSt at 100°C have an unexpectedly high temperature of phase separation as compared to those with higher kinematic viscosities.

The rejection of claim 10 under 35 U.S.C. 103(a) as being unpatentable over UK Patent Application 2,121,818 A made in the previous office action is withdrawn in view of the cancellation of claim 10. The UK patent application relates to lubrication of piston-type natural gas re-injection compressors, and not to refrigeration compressors.

#### ***Allowable Subject Matter***
